Continuation of 11. does NOT place the application in condition for allowance because: Claims 83, 85 and 87-90 which have now been amended to recite "one conservative amino acid substitution" are now rejected for the reasons of record for the rejection of claims 55-62, 73-82 and 86. Applicant argues that claim 55 does not require "specific binding" to acute myeloid leukemia cells to the exclusion of any other cell type. This is correct. However, the simple recitation of "binds to acute myeloid leukemia cells" when given the broadest reasonable interpretation includes specific binding as well as non-specific binding and is therefore not supported by the specification for the reasons set forth in the prior office action. Applicant argues that the specification provides evidence that both SEQ ID NO:1 (G5 12B) and SEQ ID NO:3 (A2 11-24) induce differentiation of acute myeloid leukemia cells. This has been considered and found partially persuasive with respect to SEQ ID NO:1 and the data provided in Figure 7. However, Figure 7 does not provide any data points for SEQ ID NO:3 (A2 11-24) alone. The data provided in the Table on page 46 is directed to the bone marrow of AML patients which is not restricted to AML leukemia cells per se..
